

APS | ENTERprise

Company Profile

APS|ENTERprise is a leading provider of value added solutions for workload automation and scheduling packages such as Control-M, TWS for z/OS, TWS End to End and UC4.

APS|ENTERprise was founded in 1996 in Mönchengladbach Germany with the mission of creating enhanced solutions for batch production and workload automation environments that provide the best return on investment possible to our customers. New requirements created by challenging projects in production management could no longer be completely fulfilled by professional services and the existing products of established providers. Based on this, APS|ENTERprise has developed some of the most beneficial value added solutions on the market and has become an acclaimed provider.

The management team at APS|ENTERprise has their roots in consulting, specifically in the workload automation area. This experience has been leveraged to incorporate real world problem resolution into its products.

APS|ENTERprise is a 100% privately owned self sufficient company with no debt and no external investors; which consequently results in no outside influence regarding product direction. Our customers are our most important asset. As such, product management decisions are based on the needs and feedback of our user community. Continually enhancing its solutions based upon this customer input has allowed APS|ENTERprise to thrive as a result.

In 2006 APS|ENTERprise Software Inc. was founded in New York to provide product sales and support directly to customers in North America.

In addition, APS|ENTERprise provides leading IT solutions from other independent software vendors.

Today the APS|ENTERprise solution portfolio offers leading IT products, experienced customer orientated staff and management, and last but not least the ability to solve our customers tasks practically, economically and reliably!
